

A numerical application in Jupyter gives:

$$q_1 = -0.2656594$$

$$q_2 = -1.64648107$$

Id est, to implement a convexity hedge on the portfolio one need to short 0.2656594 units of Bond 1 and short 1.64648107 units of Bond 2

c) Plot shown in Jupyter
